

## **SECUZED:**

### **Minimalistic rear light – Small, bright, allround talent**

SECUZED is the smallest bicycle rear light integrating a Z reflector. The SECUZED covers both reflector and lighting requirements in well designed and compact product. No need for additional reflectors.

The central part is the Z reflector. Thanks to state of the art prism technology, this reflector is wonderfully small and nonetheless fulfils regulatory requirements. The minimalistic rear light contains a crown of ten super bright LEDs around the reflector rim. The positioning of these LEDs means the rear light offers premium visibility and safety even under difficult conditions.

SECUZED also proves to be an astounding all-round talent when it comes to mounting flexibility: Two included mounts offer flexible fitting either to the mudguard or to the seat post or strut. The ingenious sliding base is highly adjustable and makes it possible to install the rear light at a 90° angle to the road in almost all assembly positions.

SECUZED is available for dynamo supply as well as for e-bikes.

- Very compact rear light
- Light crown made of ten LEDs
- Integrated Z reflector
- Standlight
- Can be mounted to mudguard, seat strut or seat post
- Sliding base for easy mounting and adjustability
- Versions available for either dynamo supply or E-bikes (6-12 V)

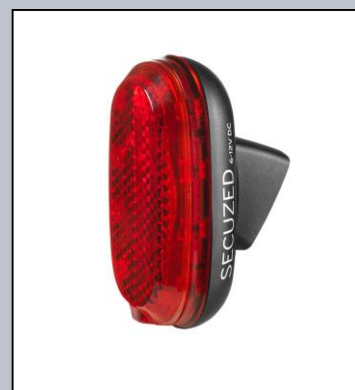

SECUZED, type 333
