IQ-XM Speed by Busch + Müller:

Battery-powered high beam light für road, gravel and mountain bikes

The popular high beam headlight IQ-XM by Busch + Müller is now available for sportive bikes - with an external battery pack.

In low beam mode, the IQ-XM can be finely tuned in three light intensity modes from 20 to 120 Lux. In high beam mode, it supplies an additional 170 Lux, opening up the light/dark boundary on top.

- 120 Lux in highest low beam level (4.5 h)
- 70 Lux in medium low beam level (7 h)
- 20 Lux in lowest low beam level (23 h)
- High beam: +170 Lux (30 min)

The battery pack supplies 4600 mAh and is fastened to the bicycle frame with a convenient hook-and-loop tape. Five blue LEDs on the battery pack show the charging status, with one LED representing 20% capacity each.

With a robust handlebar mount for all round handlebars from 22 to 32 mm diameter.

IQ-XM Speed, type 168B

German SRP €299.00

Available autumn/winter 2021/2.
