

## IQ-XS High Beam:

### E-bike high beam headlight by Busch + Müller

IQ-XS, the successful Busch + Müller headlight, is now even brighter than before and has gained a high beam version.

Its low beam light shines far, widely and very homogenously with 100 Lux and guarantees premium vision directly in front of the e-bike as well as in a distance of 50 metres. A sharp light/dark boundary prevents the glaring of oncoming traffic.

One push of the ergonomic button activates high beam mode. 150 Lux breaks boundaries, and shine even farther, wider and higher.

This output is made possible by modern LED light technology contained in the compact black anodised aluminium casing.

Sensor-controlled DRL and lateral light emission considerably increase visibility and safety of the cyclist.

Standlight and a screw-on front reflector are standard issue.

- LED high output design headlight
- 100 Lux low beam light
- 150 Lux high beam light
- Extensive light field with excellent light at close range
- Sensor-controlled DRL
- Lateral light emission
- Standlight
- Black anodised aluminium casing
- Screw-on front reflector
- For e-bikes (9-48 V DC)
- With German mark of approval
