Busch + Müller brings more light onto the road:

IQ-XL is the brightest high beam headlight for e-bikes

300 Lux in low beam mode. Now that's a statement made by the new IQ-XL by Busch + Müller. It goes above and beyond all previous light output values by far. The extensive light field is wide, long and homogenous but as with any headlight approved for road use, its light/dark boundary is exact.

With a push on the ergonomic handlebar button, all boundaries are gone: With 250 Lux, the high beam light shines even further and higher than ever before. Previously darkened areas are brightly lit and all obstacles can clearly be seen.

High-grade black powder coating on an aluminium casing as well as a newly designed mounting bracket make the IQ-XL a design headlight for pedelec e-bikes.

The handlebar button shines green in low beam and blue in high beam mode. It can be mounted on all handlebars or combined with suitable Magura and Tektro brake levers to save space.

- **300 Lux low beam mode, highly focussed,** with maximally large lighting of the road
- **250 Lux high beam mode, opens up visibility high and wide,** for best vision in previously unlit regions
- For connection to e-bike batteries (11-48 V DC)
- Aluminium casing, black powder coating
- Ergonomic push button for handlebar mounting
- Approved for road use

IQ-XL

Type: 169

SRP: €299.00

Availability: Dark season 2020/21.

INFO AKTUELL

NEW 2021

Low beam light – shines approx. 50 m

High beam light – opens up on top and to the side
